

- Go over tech stack
  - Decided on Java backend, Javascript framework frontend, most likely mySQL
- TODO
  - Look at JBoss configuration - app server
  - Wallfly - web server, instead of tomcat
  - Integrate Jenkins
    - Make some basic tests
  - README
  - Put tech stack on git - a couple sentences
  - Go over UML diagrams - ticket 103-6 \*\*\*\*\* Lock this down
  - Sequence diagram (like on homework) would be helpful to understand user input
  - Set up database
  - Check out tutorial of mass open cloud on their github
- Sprint 3 ends November 3rd
