2017-10-17 Meeting notes

Tech stack decision:

- Throwing out ServiceStack idea, relies on microsoft server
- Looking at classic Java backend with an angular frontend application to consume java api
- Junit testing for backend
- Making this decision to simplify the project, java is what's expected so it's what we're doing.
- Looking mysql vs mongodb for database, ask TA for best route

UML:

- Josh taking lead because he has most experience.
- Bailey & Ani to work with Josh.
- Going for basic class structures only.

Action Item:

- Confirm tech stack with TA on friday, get together on Saturday to start banging out code.

Client Questions:

- Confirm who assigns student position titles, assuming student assigns the position to themselves
